

ScanOrbit — Operations Manual

How to run the business legally — ongoing obligations, deadlines, and procedures

Eenmanszaak • Netherlands • SaaS

Last updated: March 2026

1. Annual Compliance Calendar

This calendar shows every recurring obligation with its deadline. Print this page and pin it somewhere visible.

1.1 Monthly

Task	When	How
Log business hours	Ongoing (weekly recommended)	Record hours in the Google Sheet / Moneybird with date, hours, and description of work done
Log all expenses	As they occur	Every business purchase → save invoice → enter in Moneybird
Reconcile Stripe payouts	After each payout	Match Stripe payout amounts to Moneybird income entries

1.2 Quarterly

Task	Deadline	How
File BTW return (aangifte omzetbelasting)	Q1: Apr 30 Q2: Jul 31 Q3: Oct 31 Q4: Jan 31	Log into Mijn Belastingdienst Zakelijk → Omzetbelasting → enter output BTW (collected from customers) and input BTW (paid on expenses) → submit. Even if both are zero, you must file.
File Opgaaf ICP (if applicable)	Same as BTW return	Only required if you had B2B sales to other EU countries in the quarter. File via Belastingdienst portal.
Review Stripe Tax thresholds	End of each quarter	Dashboard → Tax → Thresholds. Check if cross-border B2C is approaching €10,000. If yes, register for OSS.

1.3 Annual

Task	Deadline	How
File income tax return (aangifte inkomstenbelasting)	Before May 1 (extension possible to Sep 1)	Moneybird generates annual P&L and balance sheet → use these to fill in the return on Mijn Belastingdienst → declare business profit in Box 1. Claim MKB-winstvrijstelling (automatic 12.7%). Claim zelfstandigenaftrek + startersaftrek only if 1,225 hours criterion met.

Review and update Privacy Policy	January	Check: are sub-processors still accurate? Any new data categories? Any law changes? Update version number and date.
Review and update Terms of Service	January	Check: are plan features and prices still accurate? Any changes to billing, cancellation, or liability terms?
Review and update Cookie Policy	January	Check: any new cookies or tracking added? Any new third-party integrations?
Verify KVK registration is current	January	Log into Mijn KVK → check trade name, address, and business activities are still correct. Report any changes within 1 week.
Review Stripe configuration	January	Check: business name, address, BTW-ID, KVK in invoice settings. Check tax registration is still correct. Download a sample invoice and verify all fields.
Back up financial records	After tax filing	Export full year from Moneybird (invoices, expenses, annual report). Store in Google Drive archive folder. Keep for 7 years.
Evaluate insurance needs	After first profitable year	Revisit professional liability, cyber insurance, AOV based on current revenue and customer count.
Evaluate legal structure	When profit exceeds ~€100,000/year	Consult a tax advisor about converting eenmanszaak to BV. BV becomes more tax-efficient at higher profits.

2. Tax Operations

2.1 Quarterly BTW Return — Step by Step

Every quarter, even with zero revenue, you must file a BTW return. Here is the exact process.

- **Step 1:** Open Moneybird. Go to Reports → VAT return. Select the quarter. Moneybird calculates output BTW (what you collected from customers) and input BTW (what you paid on business expenses).
- **Step 2:** Log into Mijn Belastingdienst Zakelijk (mijn.belastingdienst.nl) with DigiD.
- **Step 3:** Go to Omzetbelasting → Aangifte doen. Select the quarter.
- **Step 4:** Fill in the amounts from Moneybird. Key fields: 1a (domestic sales, 21%), 5b (input VAT to reclaim). If you had EU B2B reverse charge sales, fill in 3b.
- **Step 5:** Submit. If you owe BTW, pay by the deadline. If you paid more input BTW than you collected, you will receive a refund from the Belastingdienst.

Important: If you have no revenue and no expenses in a quarter, you still file. All fields will be zero. It takes 2 minutes.

2.2 Annual Income Tax

Your business profit is taxed as personal income in Box 1. The annual process:

- **1.** After December 31, close the financial year in Moneybird. Generate the annual report (jaarrekening): profit & loss statement and balance sheet.
- **2.** Calculate business profit: total revenue minus total deductible expenses.
- **3.** Apply MKB-winstvrijstelling: deduct 12.7% from gross profit. This is automatic and applies to everyone.
- **4.** If your wife meets the 1,225-hour criterion: deduct zelfstandigenaftrek (€2,470 in 2025, decreasing each year) and startersaftrek (€2,123, first 3 years only).
- **5.** File the return on Mijn Belastingdienst before May 1. You can request an extension to September 1.
- **6.** If this feels complex, hire a boekhouder for the annual filing (€200–400 for a simple eenmanszaak). They log into Moneybird, review everything, and file on your behalf.

2.3 Stripe Tax Operations

Stripe calculates and collects VAT automatically based on customer location and business status. Your responsibilities:

- Stripe collects VAT on your behalf but does not file tax returns for you. You file BTW returns yourself using the amounts from Stripe + Moneybird.

- Download the Stripe Tax export at the end of each quarter (Tax → Exports). Cross-reference with Moneybird to ensure amounts match.
- Monitor the Thresholds tab in Stripe Tax. If cross-border B2C approaches €10,000/year, register for OSS at the Belastingdienst and update your Stripe registration from Small Seller to Domestic + OSS.
- If a customer disputes a VAT charge, check the invoice in Stripe. For EU B2B with valid VAT number, reverse charge should apply (0%). For all others, Dutch 21% applies.
- When VAT rates change in any EU country, Stripe Tax updates automatically. But verify after major EU rate changes.

3. Bookkeeping

3.1 Daily Routine

The goal is to never have a backlog. This takes 5 minutes per day at most.

- **Every business purchase:** Pay with the business bank card. Save the invoice PDF. Enter it in Moneybird with the correct VAT amount and category.
- **Every Stripe payout:** When Stripe deposits money into your business bank account, create a sales entry in Moneybird matching the payout. Once you connect your bank account to Moneybird (paid plan), this becomes semi-automatic.
- **Receipts:** If you receive a paper receipt (rare), photograph it immediately and upload to Moneybird. Paper fades; digital doesn't.

3.2 What to Track

Category	Examples	VAT Reclaimable?
Hosting & infrastructure	Scaleway, domain registration, CDN	Yes (21% NL BTW)
Software subscriptions	GitHub, Moneybird, Resend, monitoring tools, Claude/AI tools	Yes
Stripe fees	Per-transaction fees, monthly fees (deducted from payouts)	Varies (Stripe fees are often exempt from VAT)
Marketing	Newsletter tools, any paid ads (future)	Yes
Professional services	Boekhouder, lawyer, tax advisor	Yes
Banking	Business bank account fees	Yes (if VAT is charged)
Home office	Percentage of rent, internet, electricity, gas	Partially (ask a boekhouder for exact rules)
Equipment	Computer, monitor, keyboard (depreciation rules apply for items over €450)	Yes
Education	Courses, books, conferences related to AWS/security/business	Yes

3.3 Record Retention

Dutch law requires you to keep financial records for 7 years from the end of the year the document was created. This means an invoice from January 2026 must be kept until at least December 2033.

- Moneybird stores everything digitally, which counts as your primary record.
- Keep a backup in Google Drive: one folder per year, subfolders per month, all invoice PDFs saved.
- Keep bank statements (download annually from your bank, save as PDF).
- Keep all contracts (Stripe agreement, Scaleway terms, any customer DPAs signed).

4. GDPR Operations

These are your ongoing obligations under the GDPR. Most are handled by the systems you already built, but you need to monitor and respond when triggered.

4.1 Data Subject Requests

When someone emails dpa@scanorbit.cloud requesting access, deletion, or export of their data, you must respond within 30 days. Here is the procedure for each type:

Right of Access (Article 15): The user wants a copy of their data. Export their account data, scan history, findings, and audit logs from the database. Provide as JSON. Respond within 30 days.

Right to Erasure (Article 17): The user wants their account deleted. Initiate the 30-day grace period through the deletion flow. After 30 days, the system permanently deletes the account. Confirm deletion to the user by email. Audit logs are anonymized, not deleted.

Right to Data Portability (Article 20): The user wants to take their data elsewhere. Same as access, but provide in machine-readable JSON format. The export feature in your app handles this.

Right to Rectification (Article 16): The user wants to correct their data. Direct them to account settings where they can update their name and email. If they need something else corrected, do it manually in the database.

Right to Object (Article 21): The user objects to processing based on legitimate interest (e.g., analytics). Disable analytics for that user or, if they want to stop all processing, guide them through account deletion.

Track all requests: Keep a simple log (spreadsheet or Moneybird note) of every data subject request: date received, type, date fulfilled. This is your evidence of compliance if the Autoriteit Persoonsgegevens ever asks.

4.2 Data Breach Procedure

If you discover or suspect a data breach (unauthorized access to user data, database compromise, leaked credentials):

- **Hour 0–1:** Contain. Shut down the affected service, rotate credentials, block the attack vector. Document everything you do with timestamps.
- **Hour 1–24:** Assess. What data was affected? How many users? What is the risk to their rights? Document your assessment.

- **Within 72 hours:** If the breach poses a risk to users' rights, notify the Autoriteit Persoonsgegevens via their online breach notification form at autoriteitpersoonsgegevens.nl. The form asks for: nature of the breach, data categories affected, number of people affected, likely consequences, and measures taken.
- **Without undue delay:** If the breach poses a HIGH risk to users' rights (e.g., unencrypted personal data exposed), notify affected users by email. Describe the breach in plain language, what data was affected, and what they should do (e.g., change passwords).
- **After resolution:** Write a post-incident report. Document what happened, why, what was done, and what changes prevent recurrence. Keep this on file.

When in doubt about whether to notify: notify. The penalties for failing to report a notifiable breach (up to €10 million or 2% of turnover) are worse than reporting something that turns out to be minor.

4.3 Consent Management

You collect consent in two places. Both must be maintained:

Registration: Users accept the Terms of Service and Privacy Policy via an active checkbox. This consent (timestamp, version accepted) must be stored in the database. If you update the ToS or Privacy Policy materially, existing users must re-accept.

Marketing emails: Users opt in to marketing emails via a separate checkbox. Never pre-check this box. Track opt-in and opt-out timestamps. When a user unsubscribes, process it immediately and log it.

4.4 Sub-processor Changes

If you add, remove, or replace a sub-processor (e.g., switch from Resend to another email provider), you must:

- Update the Privacy Policy and DPA with the new sub-processor details
- Notify users by email at least 30 days before the change takes effect (DPA obligation)
- Give users the opportunity to object. If a user objects, discuss or allow them to terminate.
- Ensure the new sub-processor has a GDPR-compliant DPA in place before you start sharing data

4.5 Annual Privacy Review

Once a year (we suggest January), review:

- Are all sub-processors in the Privacy Policy and DPA still accurate?
- Have you added any new data collection (new form fields, new integrations, new analytics)?
- Are retention periods being enforced by the automated cleanup? Spot-check the database.
- Have any data subject requests been received? Were they handled within 30 days?
- Have there been any near-misses or incidents that should inform a security improvement?
- Has the GDPR or Dutch Uitvoeringswet AVG been amended? Check autoriteitpersoonsgegevens.nl for guidance updates.

5. Invoicing Operations

5.1 Stripe Invoices

Stripe generates invoices automatically for each subscription payment. Your job is to verify they remain compliant.

After every Stripe configuration change (plan price, business address, tax settings): download a sample invoice PDF and check that it includes: your registered trade name (ScanOrbit), full business address, KVK number, BTW-ID, customer name and address, sequential invoice number, invoice date, description of service, amount excl. VAT, VAT rate and amount, total incl. VAT, and payment terms.

For reverse charge invoices (EU B2B with valid VAT number): verify that the invoice shows 0% VAT, includes the customer's VAT number, and contains the notation "Tax to be paid on reverse charge basis" or equivalent.

For non-EU invoices: verify 0% tax and no misleading VAT notation.

5.2 Invoice Numbering

Dutch law requires sequential invoice numbering without gaps. Stripe handles this automatically with your SO- prefix (e.g., SO-0001, SO-0002). Do not manually create invoices outside of Stripe unless you maintain a separate number sequence. Mixing two numbering systems creates compliance risk.

5.3 Credit Notes

If you need to refund a customer, issue a credit note through Stripe (not a manual refund). A credit note must reference the original invoice number. Stripe generates this automatically when you refund through the dashboard.

6. KVK Obligations

As long as the eenmanszaak is registered, you have ongoing obligations to the Chamber of Commerce.

- **Report changes within 1 week:** Any change to business address, trade name, activities, or owner details must be reported to KVK within 7 days. Do this via Mijn KVK (mijn.kvk.nl) with DigiD.
- **Annual check:** Once a year, log into Mijn KVK and verify all details are current. Fix anything that's outdated.
- **If you stop the business:** You must deregister at KVK. The tax obligations continue until the Belastingdienst confirms the end of your VAT registration.

7. Legal Document Maintenance

You have five legal documents published on scanorbit.cloud. Each needs periodic review.

Document	Location	Review Trigger
Privacy Policy	/privacy	New sub-processor, new data category, law change, annual review
Terms of Service	/terms	Price change, plan change, new feature with legal implications, annual review
Cookie Policy	/cookies	New cookie or tracking added, annual review
Data Processing Agreement	/dpa	New sub-processor, security measure change, customer request
Security Policy	/security	Infrastructure change, new security measure, incident, annual review

Version control: Every update should increment the version number and update the effective date. Keep old versions archived (save the markdown file before editing). If a customer later disputes what terms applied when they signed up, you need the historical version.

Material vs. non-material changes: Material changes (new sub-processors, changes to user rights, changes to liability or payment terms) require email notification to all users and, for the ToS, re-acceptance. Non-material changes (clarifications, typo fixes, updated contact info) can be made with just an updated date.

8. EU Consumer Protection

These obligations apply when selling to individual consumers (B2C). Most of your customers will be businesses, but Pro tier individual signups are covered.

14-day withdrawal right: Your checkout flow must include a checkbox where the user consents to immediate access and acknowledges the waiver of the withdrawal right. If a consumer contacts you within 14 days requesting withdrawal and did NOT check this box, you must refund them.

Pre-contractual information: Before checkout, your pricing page must display: the price including VAT, that the subscription auto-renews monthly, how to cancel, and your business identity and contact details. This is already covered by your pricing page + Stripe Checkout, but verify after any pricing page changes.

Cancellation: Users must be able to cancel easily. The Stripe Customer Portal handles this. Make sure the “Manage billing” link is always accessible in your app.

Complaints: Provide a visible support email (support@scanorbit.cloud) and reference the EU ODR platform (<https://ec.europa.eu/odr>) in your website footer for B2C dispute resolution.

9. Content and Marketing Compliance

Your marketing strategy relies on content (blog, Twitter, Reddit). A few legal boundaries to stay within:

Blog articles: Factual claims about AWS must be accurate. If you state a specific cost or configuration behavior, verify it against current AWS documentation. Outdated technical claims can damage credibility.

Competitor comparisons: You can compare ScanOrbit to competitors, but keep it factual. “Our scans are faster than [competitor]” requires evidence. “Unlike [competitor], ScanOrbit is EU-hosted” is fine if true. Never make false claims about competitors.

Email marketing: Only send to people who explicitly opted in. Every email must include an unsubscribe link. Process unsubscribe requests immediately (Resend handles this automatically). Never buy email lists.

Reddit and social media: Always disclose your affiliation with ScanOrbit when mentioning it. Reddit rules require this. “Full disclosure: I built this tool” is standard.

Testimonials and case studies: If you ever use customer quotes or case studies, get written permission first. GDPR applies to published customer names and company names.

10. Growth Triggers — When to Act

Certain business milestones trigger new legal or tax obligations. Use this as a reference for what to do when.

Trigger	Action Required
First paying customer	Verify all legal documents are published and linked in Stripe. Verify invoices are compliant. Start filing non-zero BTW returns.
Cross-border B2C > €10,000/year	Register for OSS at the Belastingdienst. Update Stripe registration from Small Seller to Domestic. Begin charging destination-country VAT rates for B2C.
€20,000+ annual turnover	KOR exemption no longer available (not that you'd want it at this point). Ensure VAT collection is working correctly.
10+ paying customers	Get cyber/data breach insurance. Draft a standard DPA template for customers who request one.
€5,000+ MRR	Get professional liability insurance. Consider hiring a boekhouder for ongoing bookkeeping (not just annual filing). Consider a one-time legal review of all documents.
Hiring first contractor	Register as an employer at the Belastingdienst. Loonheffingen (payroll tax) obligations begin. DPA required with any contractor who accesses personal data. This is complex — consult an accountant before hiring.
Annual profit > €100,000	Consult a tax advisor about converting to a BV. The BV structure becomes more tax-efficient above this threshold. The conversion can be done tax-neutrally under Dutch law.
Enterprise customers requesting SOC 2 / ISO 27001	Begin the certification process. Budget €10,000–30,000 for SOC 2 Type II. This only makes sense when enterprise deals are large enough to justify the cost.
Non-EU customers in volume	Review if you need to comply with US state privacy laws (CCPA if California customers), UK GDPR (post-Brexit), or other local regulations. Usually only relevant at significant scale.
Product Hunt launch	No new legal obligations, but verify everything is in order before the traffic spike: legal pages published, Stripe tested, support email monitored.

11. Emergency Procedures

11.1 Customer Demands Immediate Data Deletion

A customer emails demanding all their data be deleted right now. Response:

- Acknowledge receipt within 24 hours.
- Explain the process: you will initiate deletion, which includes a 30-day grace period (as stated in your Privacy Policy). If they insist on immediate deletion without grace period, comply — GDPR Article 17 gives them the right to erasure without undue delay.

- Delete the account, cancel their subscription, and confirm by email.
- Log the request and completion date.

11.2 Belastingdienst Audit

If the Belastingdienst contacts you for an audit:

- Do not panic. This is routine, especially for new businesses.
- They will typically ask for: your bookkeeping records, bank statements, invoices (sent and received), and your BTW returns.
- If everything is in Moneybird and your business bank account, you can export and provide it quickly.
- You have the right to be assisted by a tax advisor during the audit.
- Cooperate fully and respond within the deadline they set.

11.3 Autoriteit Persoonsgegevens Investigation

If the Dutch DPA contacts you regarding a complaint or investigation:

- Take it seriously. Respond within the deadline they set.
- Gather all relevant documentation: Privacy Policy, DPA, data subject request log, consent records, breach log (if any).
- You have the right to legal representation.
- Cooperate fully. Non-cooperation is treated as an aggravating factor in any enforcement action.

11.4 Customer Threatens Legal Action

If a customer claims ScanOrbit caused them damage and threatens to sue:

- Do not ignore it. Respond politely and professionally.
- Do not admit fault or make promises. Say you will investigate.
- Review your ToS liability cap (amount paid in last 12 months).
- If the claim is serious, consult a lawyer before responding further.
- If you have professional liability insurance at that point, notify your insurer immediately.

12. Key Contacts and Resources

Who	What	URL / Contact
Belastingdienst	Tax filings, BTW returns, income tax	mijn.belastingdienst.nl
KVK	Business registration, changes	mijn.kvk.nl
Autoriteit Persoonsgegevens	Data protection, breach notification	autoriteitpersoonsgegevens.nl
Stripe Dashboard	Payments, invoices, tax	dashboard.stripe.com
Moneybird	Bookkeeping, expenses, invoices	moneybird.com
European ODR Platform	Consumer dispute resolution	ec.europa.eu/odr
BOIP	Trademark registration (when ready)	boip.int
Your boekhouder	Annual tax filing, complex questions	[To be appointed]
Your lawyer	Contract disputes, legal threats	[To be appointed when needed]

Disclaimer

This document is for operational planning purposes only and is not legal or tax advice. Dutch tax law, GDPR, and EU consumer protection rules are complex and change over time. Consult a qualified Dutch tax advisor or lawyer for advice specific to your situation. This document should be reviewed and updated at least annually.
